

News About the Environment

The New York State Public Service Commission requires electricity providers to present their customers with periodic environmental information. This is to let you know how the electricity you use is generated (and how the production of that electricity affects the environment).

This statement lets you know what fuels were used to generate your electricity, the air emissions that resulted from these sources of generation and how those emissions compare to statewide averages. It includes information on sulfur dioxide and nitrogen oxides, which are two key pollutants that contribute to acid rain and smog. It also includes information on carbon dioxide, which contributes to global climatic change. Depending on the fuel sources, size and location, the generation of electricity may also result in other public health, environmental and socio-economic impacts not disclosed here.

Complete information on this program is available in the New York State Public Service Commission brochure *Environmental Disclosure Label*. You can view a copy by visiting the Public Service Commission web site at www.dps.state.ny.us.

Fuel Sources & Air Emissions to Generate Your Electricity

January 2004 - December 2004
for Energy Cooperative of NY - Renewables

Fuel Sources

Biomass	76%
Coal	0%
Gas	0%
Hydro	0%
Nuclear	0%
Oil	0%
Solar	0%
Solid Waste	0%
Wind	24%

Total.....100%

(Actual total may vary slightly due to rounding)

Air Emissions Relative to the New York State Average

NYS Average

Sulfur Dioxide (SO₂)	0% of average
Nitrogen Oxide (NO_x)	0% of average
Carbon Dioxide (CO₂)	0% of average

0%
