¹ These figures reflect the power that we have contracted to provide. Actual figures may vary according to resource availability. We will annually report to you the actual resource mix of the electricity you purchased during the preceding year.

² New renewables come from generation facilities that first began commercial operation on or after January 1, 1998.

³ Eligible hydroelectric facilities are defined as facilities whose output is equal to or less than 30 megawatts, or facilities relicensed by FERC after 1986, or facilities certified by the Low Impact Hydropower Institute (www.lowimpacthydro.org).

The average home in New York uses 620 kilowatt hours of electricity per month. *Source: U.S. Environmental Protection Agency.*

For comparison, the current average mix of electricity sources supplying New York is 16% coal, 30% nuclear, 3% oil, 23% natural gas, 19% large hydroelectric, and 1% other. *Source: New York State Public Service Commission, Environmental Disclosure Label Program, 2006.*
