

What to Expect from a No-Cost Home Energy Assessment

HERE ARE 5 THINGS AN ENERGY SPECIALIST WILL DO IN YOUR HOME

1

Install Energy-Saving Products

Install energy-saving products like advanced power strips, programmable thermostats, and low-flow showerheads during your assessment at no cost.

Wi-Fi enabled thermostats allow you to control temperatures with your smartphone and **save up to \$180 a year.**

2

Test Insulation

Identify areas that may need additional insulation. Adding insulation is an effective way to boost comfort and reduce heating and cooling costs.

You may be eligible for **up to 100% off** on insulation following your assessment.

3

Look for Drafts

Look for areas where your home might be leaking air, including door frames, walls, electrical outlets, and unfinished basements.

Air sealing and adding insulation can help **save up to 20% on heating and cooling bills.**

4

Check Appliances & Equipment

Inspect the condition of your heating, water heating, and cooling equipment as well as your appliances. Equipment loses efficiency as it ages.

National Grid offers rebates that can **save you hundreds of dollars on upgrades.**

5

Walk Through Results & Next Steps

You'll receive a prioritized list of energy saving opportunities, plus information on contractors, valuable rebates, and the chance to apply for 0% financing on eligible upgrades through the HEAT Loan program.

Call 866-527-SAVE (7283) to schedule your no-cost Home Energy Assessment, or visit ngrid.com/startsaving
