

# Boulevard 77 Improvement and Resiliency Project Lowell, Massachusetts

## Project Update

Dear Neighbors,

This notice is being sent as a courtesy to update you as National Grid continues to make progress in efforts to rebuild the substation located at 83 Boulevard Street, Lowell, Massachusetts. As you know, we have been working to upgrade and install new equipment at the site to ensure that we can serve our customers in your area more reliably.

All major pieces of equipment have been installed, and contractors are working on several remaining activities with the anticipation of achieving final completion of the project in late spring 2025.

Over the next several months, crews will continue with site work activities associated with grounding the newly installed equipment and fencing as well as removing the former concrete slab. Beginning in the spring, when weather permits, crews will work to install landscaping around the perimeter of the substation.

We appreciate your continued patience as we complete this project. If you have any questions or would like further information on construction activities, please contact our Project Hotline at 781-236-6286. You can also email [Mwatkins@watkinsstrategies.com](mailto:Mwatkins@watkinsstrategies.com).

Sincerely,  
Matt Watkins, Consultant  
National Grid, Project Engagement
