

Weymouth Take Station Compliance Project

Fact Sheet

WHAT?

National Grid regularly updates parts of our system to ensure continued safe and reliable service to our customers.

The Weymouth Take Station Compliance Project will modernize equipment at our existing “take station”, which reduces pressure from an upstream transmission system to a level that can be used safely by local customers. Recent changes in Massachusetts Department Public Utilities (DPU) regulations require existing gas pressure regulating stations to include a number of additional features for compliance.

The improvements will not only allow to comply with updated regulations but also make an already safe station even safer. National Grid is coordinating with the town and will comply with all local regulations.

The project will take place in the National Grid Building off Bridge Street. All work will be on National Grid infrastructure.

WHERE?

The project site is located off Bridge St. in North Weymouth

WHY?

This gas regulator station was first built in the 1950's and has been regularly maintained and upgraded since. It has been identified as needing further upgrades to meet updated Massachusetts DPU codes and regulations.

WHEN?

We anticipate construction will run from **May 2026** to **November 2026**

(schedule subject to change)

STAY INFORMED:

National Grid is committed to keeping you informed and encourages feedback from project neighbors, public officials, and other stakeholders.

If you have any questions or would like additional information, please reach out to our Project Engagement Specialist **Matthew O'Brien**, or visit the project page.
