

Dunstable Substation Asset Replacement Project

Dunstable, Massachusetts

June 2023

WHAT?

As one of your regional electricity providers, National Grid regularly updates our systems to ensure that you receive the best possible service to your home and business every day.

The Dunstable Substation Asset Replacement Project will expand the existing substation fence to accommodate upgrades and replacements of aging assets as well as the installation of a new control house.

WHERE?

The Project is located at the existing substation located southwest of Pleasant Street and Pleasant Street Extension in Dunstable, Massachusetts. **The extent of the project is illustrated on the other side of this page.**

WHY?

A strong electrical transmission system is vital to our region's safety, security, and economic prosperity. The Dunstable Substation was originally built in 1971 and the assets that currently exist at the Dunstable Substation are reaching the end of their life cycle and require replacement. The Project's new control house will accommodate the necessary room to enable the substation to be fiber optic ready. The Project will improve communications, network resiliency, and reliability.

WHEN?

Construction is scheduled to begin in April 2026 and be completed by February 2027.

STAY INFORMED

National Grid is committed to keeping the lines of communication open and encourages feedback from project neighbors, public officials, and other stakeholders. We are committed to keeping residents, businesses, community groups, and local officials informed about this Project.

If you have any questions or would like additional information, please reach out to the Stakeholder Relations representative, Leah Gymziak.
