

Retro-commissioning (RCx)

Achieve long-term savings and optimal energy performance

Commercial and industrial customers in upstate New York can receive incentives for optimizing their building controls. This program can help your business reduce energy use, lower carbon emissions and improve energy benchmarking scores. An RCx project can help you save on annual energy use, so get started today.

How does RCx work?

The RCx program provides assessments to owners and operators of facilities to help identify, implement, and verify low- to no-cost energy conservation measures (ECMs). The measures improve the efficiency of major energy-using systems and reduce energy costs without adversely affecting the facility or system operations. A Qualified Service Provider will work continuously with you throughout the phases of RCx to conduct a study to identify ECMs, provide technical support to the implementation team for the installation of selected ECMs, and verify implemented ECMs.

Note that it is recommended to continuously monitor your system after verification to maximize your results. Please refer to the Real-Time Energy Management (RTEM) program if you are interested in including software monitoring of your facility, connected to your existing Building Automation System.

Program requirements

- Facility must be located in National Grid's upstate New York electric service territory
- Facility must have an average annual peak demand >110 kW

By participating in this program, you are eligible for:

- Incentives to offset product and service costs
- A customized plan to achieve immediate and long-term savings
- Verification of implemented upgrades to ensure tangible results for your organization

Participation is easy!

1

Choose a Qualified Service Provider

Visit ngrid.com/rcx to find a Qualified Service Provider that will help you submit a program application

2

Identify ECMs

After choosing a Qualified Service Provider, they will assess your facility at no cost to you and identify low- to no-cost energy conservation measures

3

Implement improvements

You implement the selected improvements that fit your facility's needs and the Qualified Service Provider completes the verification of implemented measures
