

4 KEY WAYS

ENERGY MANAGEMENT SYSTEMS

HELP BUSINESSES USE LESS ENERGY

1

Data Visualization

Get dashboard view of real-time energy data

Analyze data for all buildings down to individual zones and pieces of equipment

2

System Automation

Seamless integration with building management system

Runs system schedules based on optimum start and stop times

3

Preventive Maintenance

Proactive detection system knows when equipment dips below optimum operation level

Provides maintenance alerts and suggests preventive maintenance to avoid downtime

4

Benchmark Performance

Compare current energy consumption data to historical levels

Compare consumption to facilities of similar size and geographic location

Bottom line? An EMS can help businesses use up to 30% less energy. Get started at ngrid.com/business
