

Get More from Your Building Upgrade Project

Bundle Up Your Upgrades and Earn Additional Incentives

Planning a heat pump project? The **Bundle Up Bonus Program** offers enhanced incentives for commercial customers who combine qualifying weatherization improvements with a heat pump project.

Weatherization measures, such as insulation and air sealing, can reduce heating and cooling needs, improve comfort, and help optimize heat pump performance. By completing these upgrades together, you can maximize available incentives while improving building comfort and performance, reducing energy use, and increasing the value of your energy efficiency investment.

Get More Value from Every Upgrade

- **Heat pump + 1 or 2 weatherization measures:**
Receive a **10% bonus** incentive on both your heat pump and weatherization projects.
- **Heat pump + 3 or 4 weatherization measures:**
Receive a **20% bonus** incentive on both your heat pump and weatherization projects.

Ready to Get Started?

Contact your National Grid energy efficiency representative to learn more and determine eligibility.

To qualify, the project must meet the equipment requirements of the Commercial Electrification and Weatherization Programs. The incentive is issued only after satisfactory post-installation inspections have been completed for both the heat pump and weatherization work.

Program Rules apply. Customer must be a National Grid customer who pays the System Benefits Charge (SBC).
