

Request for larger meter or service for added load requirements

nationalgrid

HERE WITH YOU. HERE FOR YOU.

The following information is necessary before National Grid can initiate a meter upgrade or new service if additional equipment is being installed at your home.

- National Grid performs an analysis to determine if the existing service to your home is adequate in size to provide the pressure necessary to operate additional equipment to your existing service.
- New equipment may require a larger meter to be installed or a brand new larger diameter service which requires City/Town or State permits (lead time can vary depending on job scope).
- All new service relays require customer payment and will be billed prior to service installation.
- A National Grid analyst will contact the homeowner/contractor once analysis is complete with next steps.

Please Note: Equipment may not operate properly if meter and/or service is not properly sized, possible inability to meet full demand on LP systems for increased gas load requests.

ALL FIELDS MUST BE COMPLETED TO PROCESS YOUR REQUEST

Homeowner

Installation Address

Billing Address

Phone Number of Contact Person

Email Address

Plumber/Contractor/Installer

Installer Phone Number

Installer Email Address

FIELDS BELOW MUST BE COMPLETED BY THE PLUMBING/HEATING CONTRACTOR
