

The Natural Gas Price Advantage

Where savings, reliability, and environmental responsibility all come together.

There has never been a better time for you to convert your home from oil heat to natural gas. While you may be aware that natural gas heat provides greater dependability, versatility, cleanliness, and convenience, you may not know that it also provides significant savings.

The natural gas price advantage provides savings your family can count on.

Natural gas provides a clear long-term price advantage versus oil. Currently, heating oil is twice the price of natural gas. Over the past five years, natural gas has delivered an impressive 20% price advantage. This overwhelming price advantage is roughly the same over the past twenty years.

When you consider both the price of fuel and other cost-saving benefits, it is clear that converting your home to natural gas can cut your utility bills.

Did you know?

In addition to the natural gas price advantage, you can save money in the following ways:

Electricity Costs: An oil burner consumes a significant amount of electricity to operate. Depending upon the size, this can range from \$40 - \$100 per year. Natural gas systems use a negligible amount of electricity.

Insurance Costs: Many insurance companies charge higher premiums for homes with oil tanks. This is especially the case with buried oil tanks, because they have the potential to leak.

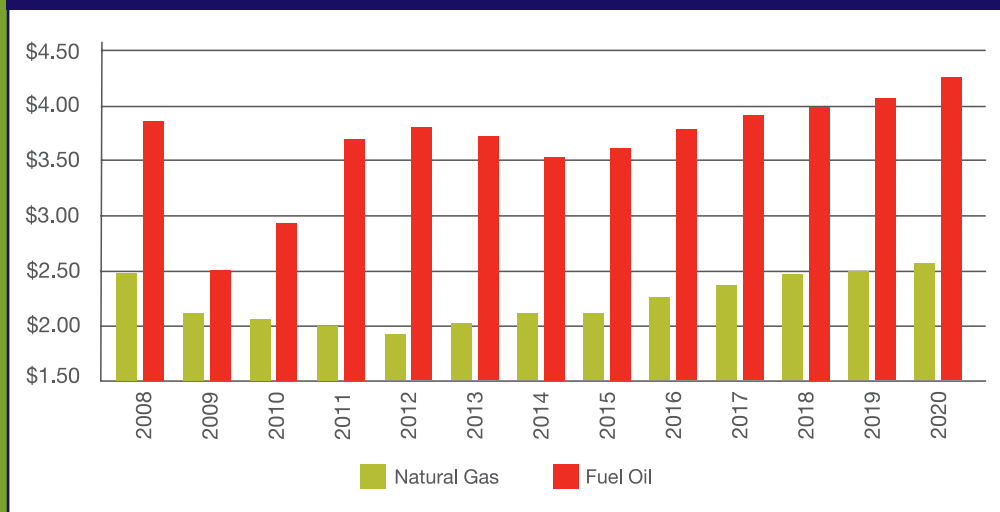

Equipment Life: Clean burning natural gas should result in longer equipment life. Your family can achieve real savings by postponing a major capital investment.

Don't just take our word for it.

The U.S. Energy Information Administration (EIA) indicates that oil prices are not only higher than natural gas prices, they have been steadily climbing over the last few years and will continue to climb.

**Natural Gas vs #2 Heating Oil
Equivalent Pricing - Dollars per Gallon**

Your family can save on its heating bills.

Switching from oil heat to natural gas provides substantial savings. In addition to the price advantage of natural gas, a new heating system can be more efficient than a 10-year old system.

- Your family saves by using less energy with a new natural gas system.
- Natural gas burns more efficiently, so you use less gas than you would oil with less maintenance.
- You don't pay for natural gas until you use it.

Other great reasons to switch to natural gas.

- **Better for the environment:** Natural gas is cleaner than oil, which means less carbon emissions are released into the air.
- **More convenient:** Natural gas flows directly into your home from an underground pipeline, so you will not have to worry about arranging deliveries.
- **Burns cleaner:** With natural gas there are no odors, soot or fumes to clean or inhale.
- **Provides dependability:** Natural gas is reliable, American-made resource.
- **Service without electricity:** Some natural gas appliances operate during a power outage, so you may continue to stay warm, cook meals, and have hot water.

Residential Yearly Average Pricing Summary

Year	No. 2 Heating Oil Price After Taxes \$/gal - US	Residential Natural Gas \$/gal Equivalent NY/LI
2008	\$3.75	\$1.49
2009	\$2.51	\$2.16
2010	\$2.93	\$2.09
2011	\$3.71	\$2.02
2012	\$3.75	\$1.89
2013	\$3.69	\$2.02
2014	\$3.56	\$2.17
2015	\$3.61	\$2.17
2016	\$3.72	\$2.28
2017	\$3.85	\$2.36
2018	\$3.96	\$2.46
2019	\$4.09	\$2.54
2020	\$4.22	\$2.61
